

ewo AT DUBAI AIRPORT SHOW 2022

Company [ewo - the light you have been looking for](#)

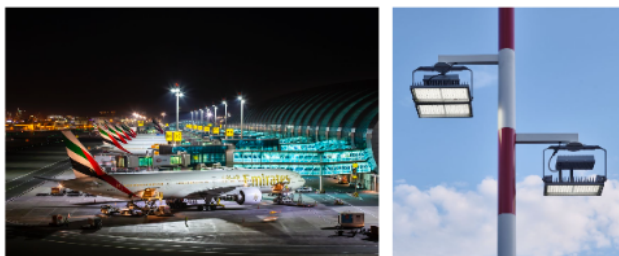

Date 12.05.2022

ewo is pleased to announce its participation in the Airport Dubai Show 2022 as a new member of Air Tech Italy, the leading Trade Association representing Italian companies specialized in supplying products, technologies and services for airports and air-traffic control.

This is the first exhibition opportunity for ewo to return to Dubai, after the city's [International Airport lighting renovation project](#) was completed in 2020. The project, in association with state-of-the-art pole manufacturer FUCHS Eurocoles, and for which ewo supplied its [R-System modular floodlights](#), will lead to a reduction of 63 % energy consumption at DXB, one of the busiest airports in the world, delivering 7,000 MWh annual energy savings to service Dubai International Airport's near 90 million annual passenger journeys.

At the Airport Show ewo's team will be presenting our flagship airport floodlight R-System gen3, the newest generation launched in that very same year, most commonly used for apron illuminations, delivering outstanding value with L80B10 > 100,000 h lifetime, up to 205,000 lm lumen package, a variety of accessories and versatility accomodating all manner of applications. R-System gen3 even forges ahead into new fields such as sport stadiums.

ewo at Dubai Airport Show, Dubai, 17-19 May 2022, Italian Pavilion, stand 4210 booth no.3

About ewo

ewo creates high-quality lighting systems for public spaces. At the main facility of this family-run business, headquartered in South Tyrol (Italy), products are developed which bring light to a variety of different settings: urban gathering points, squares and buildings, streets, walking trails and airports. www.ewo.com

ewo's Large Area Lighting projects:

ewo was the first to supply an airport apron system entirely with LEDs, with its partnership with Innsbruck airport in 2011. Since that achievement, the company's prowess in supplying illuminations for Large Area Lighting projects has gone from strength to strength.

From impressive airport apron projects at Munich MUC Airport, to functional logistics projects like ÖBB Terminal Wolfurt, ewo floodlights deliver power and efficiency capable of transforming the efficiency, accuracy and functionality of any Large Area Lighting system even in the most extreme conditions.

Visit LAL.ewo.com to learn about these projects and more.
